SUMMARY

Senior Data Engineer with 7+ years of experience designing and operating production-grade data pipelines and analytics infrastructure. Proven ability to build scalable, governed data systems that power product analytics and data-driven decisions at scale. Strong Python and SQL developer with hands-on experience in Spark, Databricks, Airflow, Kafka, and cloud data platforms (Snowflake, Athena, Redshift). Experienced in establishing data quality and governance frameworks, and partnering closely with Product, Data Science, and Analytics teams to deliver trusted data.

TECHNICAL SKILLS

- **Languages & Data:** Python, SQL, Java
- **Big Data & Orchestration:** Apache Spark, Databricks (Delta Lake, Unity Catalog), dbt, Airflow, Kafka, Apache Iceberg
- **Cloud Platforms:** AWS (S3, EMR, EMR Serverless, Glue, Athena, Redshift, DynamoDB, Lambda), Snowflake
- **Analytics & Event Tracking:** Amplitude, Segment, QuickSight

WORK EXPERIENCE

Mapbox

Oct 2022 – Present

Senior Software Developer

Helsinki, FI

- Led design, development, and maintenance of scalable data infrastructure powering Mapbox's core vector tile datasets — ensuring pipeline reliability and data quality at petabyte scale.
- Built and optimised Spark + Airflow pipelines on AWS (EMR Serverless, Glue, Athena, S3), reducing pipeline latency and enabling reliable delivery of billions of map tiles to downstream consumers.
- Collaborated with Product, Analytics, and Platform Engineering teams to define data requirements and deliver pipelines and data models that support product decisions at scale.
- Established data quality monitoring, schema governance, and lineage documentation for critical data domains, improving reliability and trust for analyst and data science consumers.
- Mentored engineers and analysts on best practices for SQL optimisation, pipeline design, and production code quality; conducted code reviews and contributed to team-wide engineering standards.

Basware

May 2021 – Sep 2022

Cloud Developer

Helsinki, FI

- Developed and maintained production ETL pipelines on AWS (Lambda, EMR, Glue, Athena, Redshift, DynamoDB, S3), processing financial and procurement data for enterprise SaaS customers.
- Ingested, modelled, and transformed data from diverse sources into a governed analytics layer, enabling business stakeholders to generate reliable, self-serve insights at scale.
- Improved pipeline observability through monitoring dashboards and alerting, reducing mean time to detection of data incidents and increasing overall data reliability.

Trafore Oy

May 2018 – May 2021

Data Engineer

Helsinki, FI

- Architected and engineered the data layer for a CRM taxi management platform, designing normalised data models and integrating payment providers (Payex, Adyen) for transactional reliability.
- Built and orchestrated production ETL pipelines with Apache Airflow, automating invoicing, payroll, and compliance reporting workflows (Finvoice, Payslip, Tulorekisteri).
- Translated business requirements from non-technical stakeholders into robust, scalable data models, reducing manual reporting effort and improving accuracy of payroll and compliance outputs.

EDUCATION

Aalto University

August 2021

Master of Security and Cloud Computing

Helsinki, FI

Aalto University

August 2018 – June 2021

Bachelor of Data Science, GPA 4.43

Helsinki, FI
